

Anthropic Programs for Nonprofit Organizations

Briefing Note for Leadership

Prepared: 16 July 2026 **Subject:** Overview of Anthropic's support programs for nonprofit and mission-driven organizations, and their potential relevance to the UN Project Advisor (UNPA) initiative

1. Executive Summary

Anthropic — the AI safety company behind the Claude family of models — operates a structured support program for nonprofit organizations, launched on 2 December 2025 in partnership with GivingTuesday under the name **Claude for Nonprofits**. The program combines steep pricing discounts (up to 75%), sector-specific data integrations, free staff training, and, as of June 2026, a **\$150 million fellowship initiative (Claude Corps)** that embeds fully funded AI specialists inside nonprofit organizations.

For the UNPA initiative, these programs demonstrate that Anthropic has an established institutional pathway for supporting mission-driven organizations, including a dedicated nonprofit sales team for enterprise-level negotiations. While the UN Secretariat's intergovernmental status does not map directly onto the standard eligibility criteria (501(c)(3) or equivalent), the existence of these programs provides a strong basis for a direct partnership conversation with Anthropic.

2. Program Components

2.1 Discounted Pricing (up to 75%)

- Up to **75% discount** on Claude **Team** and **Enterprise** plans.
- In practice: Team plan seats start at approximately **\$8 per user per month** (standard tier) and **\$40 per user per month** (Premium tier); Enterprise pricing is negotiated through Anthropic's sales team.
- Discounted seats include the **same frontier models** available to commercial enterprise customers (Claude Opus, Sonnet, and Haiku lines) — not a reduced-capability version.
- **Claude Code** (agentic coding tool) and **Cowork** (agentic knowledge-work application) are included with every seat.
- Enterprise plans are configurable to meet **SOC 2 Type II, ISO 27001, ISO 42001, and CSA STAR** compliance requirements.

- By default, Anthropic does **not use data from Team or Enterprise accounts to train models** — a critical consideration for organizations handling sensitive institutional data.

2.2 Sector-Specific Integrations (MCP Connectors)

Claude connects directly to platforms widely used in the nonprofit sector via the Model Context Protocol (MCP):

Connector	Function
Benevity	Access to 2.4M+ validated nonprofits for cause discovery, volunteering, and donation research
Blackbaud	CRM and fundraising tools for donor management, campaign tracking, and giving optimization
Candid	Vetted data on nonprofits, funders, grants, and philanthropic opportunities

Standard enterprise connectors (Microsoft 365, Google Workspace, Slack, Asana, Box) are also available.

2.3 Free Training — AI Fluency for Nonprofits

- A free, self-paced course developed with GivingTuesday, delivered through **Anthropic Academy**.
- Covers grant writing, program evaluation, donor engagement, and organizational efficiency.
- Designed for staff **without technical backgrounds** — suitable for organization-wide AI literacy building.
- Supplemented by step-by-step guides for key nonprofit workflows.

2.4 Claude Corps — \$150M Fellowship Initiative (announced 11 June 2026)

- A **\$150 million** national fellowship program that will train and embed **1,000 early-career AI fellows** inside U.S. nonprofit organizations.
- Host organizations receive, **at no salary cost**:
 - A fully funded fellow (\$85,000 annual salary plus benefits, 12-month placement);
 - A one-time **\$10,000 implementation grant**;
 - Up to **\$2,500** in Claude licenses and API credits per fellow.

- First cohort of 100 fellows starts October 2026; applications for the first round close **17 July 2026**.
- Administered with CodePath (employer of record) and Social Finance (host grants and measurement).

2.5 Implementation Partner Ecosystem

Anthropic collaborates with established nonprofit-sector consultancies — **The Bridgespan Group, Idealist Consulting, Vera Solutions, and Slalom** — to provide tailored support on AI strategy, impact measurement, and organization-wide implementation.

2.6 Related Program — AI for Science

Separately, Anthropic offers **free API credits** to researchers at universities and nonprofit organizations working on high-priority scientific research.

3. Eligibility and Verification

- Standard eligibility: organizations with **501(c)(3) status (U.S.) or equivalent international charitable designations**, plus K-12 public and private schools and certain mission-based healthcare organizations.
 - **Excluded from the standard track:** government agencies, political organizations, and higher-education institutions.
 - Verification for Team plans is handled by Anthropic's partner **Goodstack** (a 2–3 minute process); Enterprise customers are verified directly by Anthropic's nonprofit sales team during the sales process.
 - The program is **global** — no geographic restrictions.
 - The discount remains active as long as nonprofit status is maintained; no annual reapplication is required.
-

4. Demonstrated Impact in the Sector

Organizations already using Claude report substantial operational gains:

- **International Rescue Committee** — faster communication with local partners and field-data analysis in time-sensitive humanitarian settings.
- **Epilepsy Foundation** — 24/7 support to 3.4 million Americans living with epilepsy.
- **IDinsight** (global development research) — reports working up to **16× faster** with Claude.

- **Rising Academies** — chatbot tutors reaching 150,000+ students across Sub-Saharan Africa.
 - A public-health team in Guatemala built an interactive geospatial tool for dengue-prevention targeting in **three days instead of weeks**.
-

5. Relevance to the UNPA Initiative

1. **Institutional pathway exists.** Anthropic maintains a dedicated nonprofit sales function and negotiates enterprise terms individually. This is the appropriate entry point for the UN Secretariat, since the standard Goodstack verification track (built around 501(c)(3) equivalents) excludes government and intergovernmental bodies.
2. **Pricing precedent.** The publicly documented 75% discount ceiling establishes a benchmark for what Anthropic is willing to offer mission-driven organizations, strengthening the negotiating position for UNPA's Anthropic partnership discussions.
3. **Technical alignment.** The program is built around the same stack UNPA already uses — Claude models via API, Claude Code, and MCP connectors — meaning any negotiated arrangement would apply directly to UNPA's existing architecture without re-platforming.
4. **Data protection posture.** Anthropic's default no-training policy for Team/Enterprise data and configurable compliance (SOC 2, ISO 27001/42001) address key institutional-data concerns relevant to a UN deployment.

Recommended next step: Initiate direct contact with Anthropic's Enterprise/nonprofit sales team to explore a tailored arrangement for the UN Secretariat, referencing the Claude for Nonprofits framework as the starting point for terms.
